

Metrological Proud to be RDK Pre-Integrated App Store as RDK Adoption Continues to Rise

RDK adoption is continuing to rise, and we're proud to say our Metrological App Store is pre-integrated with RDK. As recently announced by RDK, more than 60 million devices are deployed with RDK software, as the open source software platform powers video and broadband services around the world. And, there are now more than 430 technology companies participating within the RDK community, including many of the world's leading CE manufacturers, SoC companies, software developers, system integrators, and service providers.

RDK member companies can benefit from the RDK App Framework to build and manage their own apps; select an RDK pre-integrated app store solution, such as the Metrological App Store; or choose an RDK Video Accelerator (an IP set-top box is fully integrated with the RDK App Framework and Metrological App Store) from leading suppliers, such as CommScope, Humax, KAON, and Technicolor.

The Metrological Application Platform provides a unified TV App Store and back-office product suite for onboarding, monetizing and optimizing the life cycle of web and native apps across its different TV platforms and set-top boxes. The Application Platform is used for onboarding premium OTT services and gives service providers access to APIs to support features such as contextuality, second screen and voice control; and the ability to source content from the Metrological App Library with more than 300 TV apps.

As RDK continues to grow, we are excited to help seamlessly integrate apps and OTT services into a single viewer experience for video service providers across the globe.
